### Description

This data package contains an marrayRaw instance for the as well as 6 gpr files of the beta7 microarray experiment.

### Usage

```
data(beta7)
```

### Details

Each arrays(hybridization) involved  $\beta 7+$  cell RNA from a single subject (labeled with one dye) and  $\beta 7-$  cell RNA from the same subject (labeled with the other dye). Target RNA was hybridized to microarrays containing 23,184 probes including Operon Human version 2 set of 70-mer oligonucleotide probes and 1760 controls spots (e.g. negative, positive and normalization controls spots).
